Work Experience

PHP developer Intern – Mactavis Digital

05/2022 – 05/2023 | Lagos, Nigeria

- Designed, developed, and maintained backend services and APIs using PHP and MySQL.
- Assisted in the development of scalable web applications, ensuring high performance and responsiveness.
- Participated in full-stack development by contributing to both frontend and backend tasks.

Education

Caleb University – Lagos, Nigeria

09/2020 - 07/2024

BSc Biochemistry

Leadership Role: Core team member and Head of Backend Development for the Google Developer Student Clubs (GDSC) Caleb University chapter, leading backend development projects and mentoring fellow students. Represented Caleb University at the Zenith Tech Fair, a reputable conference, based on outstanding academic performance and achievements.

Skills

Backend Development: Proficient in building and maintaining RESTful APIs using Node.js and Java., Skilled in implementing server-side logic, authentication, and data processing for efficient application performance., Familiar with deploying backend applications on cloud platforms and managing server configurations.

REST APIS: Applied CRUD operations and standardized HTTP methods (GET, POST, PUT, DELETE) to streamline data processing., Enhanced user experience by implementing error handling and status codes that adhere to RESTful standards., Designed and implemented RESTful APIs to facilitate seamless communication between frontend and backend services.

Git: Proficient in using Git for version control, managing code changes, and collaborating with team members effectively.

Spring Boot: Developed and maintained backend systems using Spring Boot to build scalable and efficient applications., Utilized Spring Data JPA for seamless integration with MySQL and PostgreSQL databases, optimizing database interactions, Leveraged Spring Boot's dependency injection for effective code modularization and reusability.

Database Management: Designed and managed PostgreSQL and MySQL databases to support scalable and reliable application data storage., Utilized SQL to perform CRUD operations and complex queries for effective data retrieval and manipulation., Integrated Spring Data JPA with PostgreSQL and MySQL for seamless data access in Spring Boot applications.

Problem-Solving: Strong analytical skills with the ability to identify issues, develop solutions, and implement effective strategies in both research and development settings.

Projects

HealthMetrics, Personalized Fitness Full-Stack App

03/2025 – 05/2025

- Engineered a comprehensive health monitoring platform featuring metabolic rate calculation, nutritional tracking, and fitness planning capabilities
- Designed and implemented a secure authentication system using JWT and Spring Security, incorporating token expiration and automatic session termination
- Developed a responsive frontend architecture with React and TypeScript, utilizing Tailwind CSS for custom UI components without external dependencies
- Constructed a robust REST API backend with Spring Boot, implementing proper request validation and error handling
- Optimized database performance through efficient MySQL schema design and query optimization
- Resolved complex technical challenges including CORS configuration, secure password storage, and token refresh mechanisms
- Demonstrated self-directed learning by mastering all technologies through documentation and independent research
- Technical Stack: React, TypeScript, Tailwind CSS, Java, Spring Boot, Spring Security, JWT, MySQL, Git

Green Bank, A Fintech Application

12/2024 – 01/2025

- Designed and implemented the backend of a banking application using Spring Boot and Lombok for streamlined development and reduced boilerplate code.
- Developed features to allow users to: Create a new account, with an automated confirmation email containing account details.
- Perform transactions, including crediting, debiting, and money transfers between accounts.
- Receive email alerts for all credit and debit activities.
- Built RESTful APIs with endpoints such as: /balanceEnquiry, /nameEnquiry, /credit, /debit, /transfer, /createUser, and /bankStatement.
- Enabled bank statement generation for custom date ranges using iText Core, with statements sent via email in PDF format.
- Stored and managed user data (e.g., account details, balances, and transaction history) securely in a MySQL database.
- Ensured robust API documentation and testing through Swagger for improved usability and debugging.
- Utilized Hibernate annotations to track creation and update timestamps for each account and transaction.
- Adopted a modular approach to transaction handling, ensuring seamless email integration for confirmations, alerts, and bank statements.
- Focused on scalability and data integrity by designing database schemas to handle dynamic account and transaction data.

User Management API

11/2024 – 12/2024

- Designed and developed a User Management API using Spring Boot, providing secure user registration, login, and CRUD operations.
- Implemented JWT-based authentication and role-based access control to secure endpoints, ensuring fine-grained permissions for HTTP methods.
- Integrated Spring Security with custom filters for token validation and login processing, enhancing application security.
- Utilized Spring Data JPA for database interactions, including efficient data handling with pagination.
- Applied BCrypt hashing for secure password encryption, protecting user credentials from unauthorized access.
- Troubleshooted and resolved complex 403 Forbidden errors, refining security filter configurations for PUT and DELETE methods.
- Planned and configured the API to serve as the backend for a mobile application with a base path of /mobile-app.
- Gained expertise in building scalable RESTful APIs and configuring Spring Security filter chains.

Customer Management System

10/2024 – 10/2024

- Built a Customer Management System using Spring Boot with Spring Web to create a robust backend application.
- Designed and implemented RESTful APIs to facilitate CRUD operations for customer data, ensuring seamless integration with frontend applications.
- Employed Spring Data JPA for easy and efficient data access, allowing for streamlined interaction with the PostgreSQL database.
- Configured PostgreSQL to run in a Docker container, ensuring a consistent environment and simplifying database setup across all stages.
- Ensured data persistence and optimized database interactions through custom queries and repository patterns in Spring Data JPA.

Java Calculator App

09/2024 – 09/2024

- Developed a Java-based calculator application with a user-friendly interface using JavaFX for the frontend.
- Implemented essential arithmetic operations (addition, subtraction, multiplication, division) with precise and efficient algorithms.
- Designed the application to handle input validation and prevent calculation errors, enhancing user experience.
- Applied object-oriented principles (OOP) to organize code for modularity, maintainability, and future scalability.

My Portfolio

09/2024 – 09/2024

- Developed a personal portfolio website using HTML, CSS, and JavaScript to showcase projects and skills.
- Deployed the website using Netlify for easy access and visibility to potential employers or clients.
